

Build your own Utility Defenders characters at home!

Make a 3D papercraft of your very own Utility Defender—no tape or glue required. Let the folding fun begin! Note that help from an adult is needed for this activity. (Assembled papercraft character height: 3.25 inches)

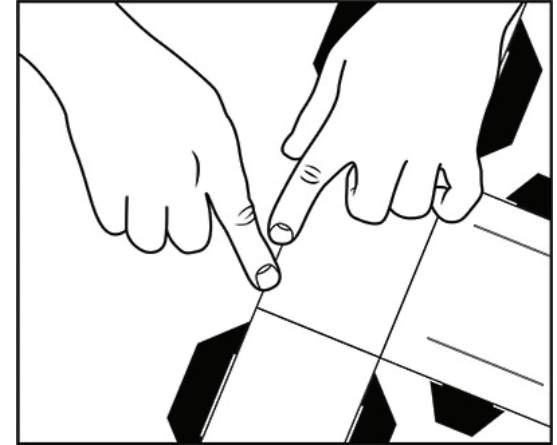

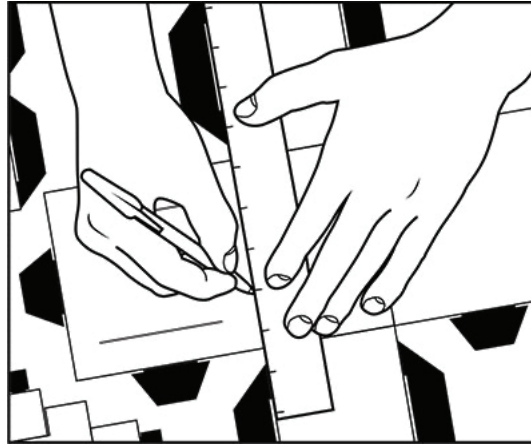

Instructions

1. Print the pattern on an 8.5" x 11" sheet of paper. Standard printer paper works fine, but cardstock will be sturdier.
2. Ask an adult to help you cut out the pattern using scissors or a hobby knife. The pattern contains the face, body, arms, belt and cape. Cut each lettered black line within the head and body.
3. Slit each of the white lines for the lettered tabs. These slits will give your character their shape.
4. Fold and firmly crease along the solid black lines.
5. To assemble your 3D character, pair each black letter tab with its matching letter slit. These tabs are designed to slide and lock into each slit.
6. Slot the paired tabs together (R tab slides into slit R, S tab slides into slit S and so on).
7. Continue matching letters until you've assembled the face, body, arms, belt and cape together. Your Utility Defender is complete!

Step by Step Instructions

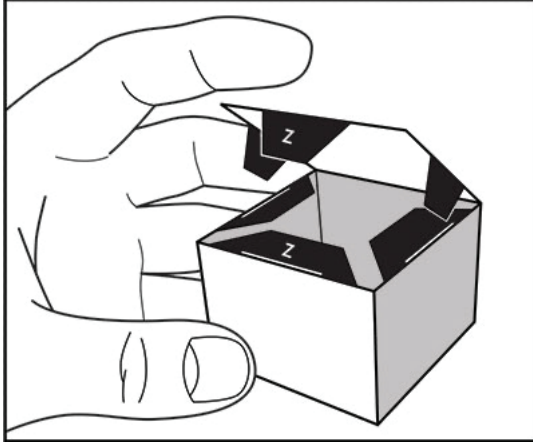

- 1** Cut out the shapes on the page. Scissors will work but a hobby knife will give you nice straight lines if you use a metal ruler.

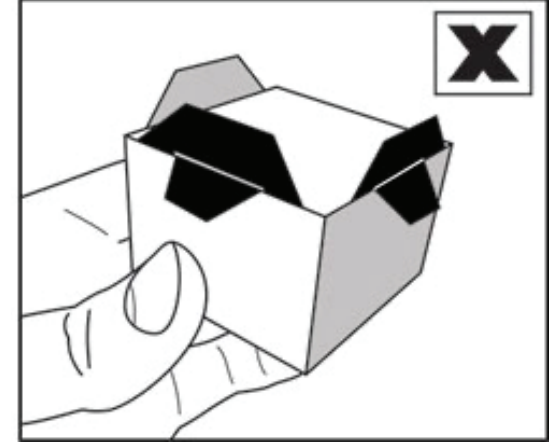

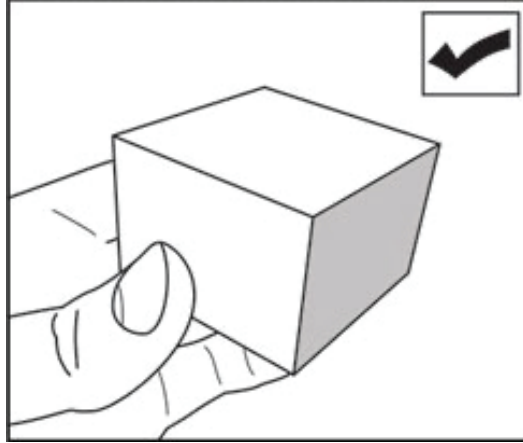

- 2** Using an empty pen or a paperclip score the lines you will be folding – it will ensure a cleaner fold.

Step by Step Instructions

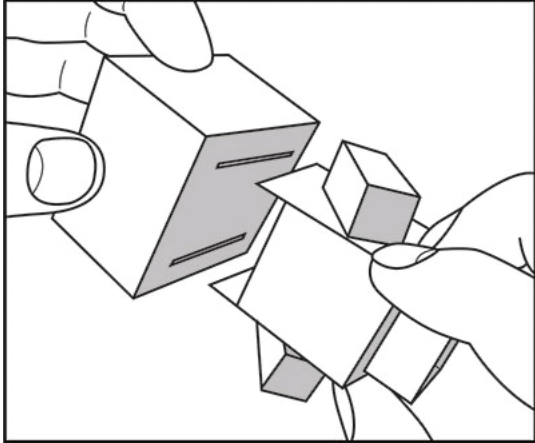

3 Fold!

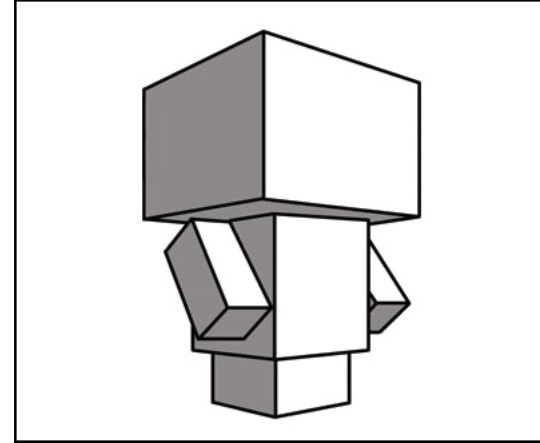

4 Fold the tabs into the corresponding slots. (Tabs should go inside the main shape! There shouldn't be any tabs sticking out when you are done.)

Step by Step Instructions

5 Each of the 6 miniature pieces of the body – head, torso, arms, leg and cape – will connect by being “plugged in”. Be sure to match the labeled tabs just like you did before!

6 All Done!
